

ACM/IEEE INTERNATIONAL SYMPOSIUM ON LOW POWER
ELECTRONICS AND DESIGN

19th International Low Power Design Contest

EPFL, Lausanne, Switzerland July 29–31, 2019

www.islped.org

Submission deadline: 11:59PM Pacific Standard Time, **May 3rd, 2019**

The International Symposium on Low Power Electronics and Design (ISLPED) is holding the International Low Power Design Contest to provide a forum for universities *and industry* to showcase original "power-aware" designs and system solutions to highlight the design innovations targeting power and energy-efficiency improvement. The goal is to encourage and highlight design-oriented approaches for power reduction.

The best designs will be selected and invited for presentations at ISLPED 2019. A special session in the symposium will be devoted to the Low Power Design Contest and the Demonstrations will be shown during the Industry Reception.

Selected designs are invited to join the on-site final contest. Those candidates can apply for travel grants, and get 50% discounted registration fee. (However, at least one full registration is still required for an ISLPED regular paper). Awards will be given for the best designs and demonstrations from industry and academia based on the on-site demonstration and presentation.

The deadline for submissions is **11:59PM Pacific Standard Time, May 3rd, 2019**. The manuscript (without a cover page, see the submission guideline) should be submitted electronically via the ISLPED submission website, and a cover page (in a separate PDF file) should be submitted to the design contest chair via email. Acceptance and rejection notices will be emailed to the contact author by May 31st, 2019.

CONTEST SUBMISSION GUIDELINES

- Submissions of **original designs developed at universities OR in industry are invited**. Designs submitted to previous ISLPED Design Contests are not eligible. Submitted designs should not have received any awards in other contests. Designs related to the regular papers submitted to ISLPED 2019 or published in other conferences after **January 1, 2018** are also welcome. In such a case, the authors need to explicitly state that they have submitted a regular paper or their papers are accepted in other conferences **on the cover page**.
- A 4-page demo proposal is required for a new design. If the design is published before, a 2-page demo proposal and a copy of the previously published paper are needed. **Designs completed prior to January 1, 2018 are not eligible**. The demo proposal should follow the format of a regular ISLPED conference paper and contain the title of the project, a 60-word abstract and a description of the design. Refer to the following link for the paper template in word or latex format:
<http://www.acm.org/sigs/publications/proceedings-templates/>
- Each submission **should include a cover page** in a separate PDF file including:
 1. Name, affiliation and address of each author;
 2. A designated presenter, should the entry be accepted;
 3. A statement on whether a related paper was also submitted to this year's ISLPED as a regular submission or was published before;
 4. The following statement: "All appropriate organizational approvals for the publication of this paper have been obtained. If accepted, the author(s) will select a speaker to present and demo the design at the Symposium."
 5. Corresponding author, including his/her telephone number, fax number, email address, and **his/her signature**.The cover page needs to be sent to the email address of Design Contest chair/co-chair. A template of cover page will be provided on ISLPED website.
- Submissions may contain but are not limited to proof-of-implementation in the form of silicon chip, board or system photographs and software etc. An entry purely focusing on optimization techniques/algorithms/tools/simulations is not suitable for the contest. The submission should clarify the originality, distinguishing features, and the measured performance metrics of the design. The power targets of the design, the design choices related to power, and the specific optimizations, techniques and tradeoffs used to reduce power need to be highlighted.
- Selected design will be briefly presented at the Symposium in a **special session**. **An on-site demonstrations is also mandatory** and the **final design contest award** will be selected based on the demonstration and the presentation. Selected entries will not be published in the ISLPED conference proceedings so that the authors can re-submit the related papers to other conferences.
